

Clinical Note - Pulmonology

Patient ID: 100456

Age: 72 | Gender: Male

Facility: Bay Medical Center

Provider NPI: 1987654321

Date of Visit: 2026-08-16

DIAGNOSIS & CONDITION:

Severe Chronic Obstructive Pulmonary Disease (COPD). Patient presents with chronic severe hypoxemia.

Arterial Blood Gas (ABG) test performed at rest today shows PO2 of 52 mm Hg.

Pulse Oximetry shows oxygen saturation (SaO2) of 86% at rest.

Patient experiences significant shortness of breath affecting daily activities.

Patient meets all statutory documentation and payment rules discussed in the LCD-related Policy Article (A52514).

Inhalers and nebulizers optimized. Oxygen therapy is the only remaining viable intervention.

Candidate ICD-10-CM: R09.02 (Hypoxemia) and J44.9 (Chronic obstructive pulmonary disease, unspecified).

Order Placed: HCPCS E0424 (Stationary compressed gaseous oxygen system, rental).

HCPCS Code E0424 is documented as a covered and medically necessary code for this diagnosis.
