

Clinical Note - Pulmonology

Patient ID: 100459

Age: 81 | Gender: Female

Facility: Bay Medical Center

Provider NPI: 1987654321

Date of Visit: 2026-08-16

DIAGNOSIS & CONDITION:

Cor Pulmonale / Congestive Heart Failure, complicated by an unlisted rare vascular anomaly.

CLINICAL FINDINGS & EVIDENCE:

Arterial Blood Gas (ABG) PO2 is 58 mm Hg (borderline).

Patient exhibits severe dependent edema, but the etiology is ambiguous. It is unclear if the edema is secondary to cor pulmonale or a side effect of a newly prescribed experimental medication.

The patient's condition is highly complex and atypical for standard oxygen coverage guidelines.

Candidate ICD-10-CM: I27.81 (Cor pulmonale (chronic))

PROCEDURES / ORDERS:

Order Placed: HCPCS E0424 (Stationary compressed gaseous oxygen system, rental)
